Plagiarism Policy

The International Journal of Intelligent Computing Systems is dedicated to maintaining the highest level of academic honesty and ethical publishing practices.

All submitted manuscripts are screened for plagiarism using Turnitin software. This ensures that the manuscripts are original and free from uncredited sources.

The journal adheres to the following similarity index guidelines:

- Similarity Index below 15%: Accepted and proceeds to the peer review process.

- Similarity Index between 15% and 25%: Manuscript returned for revision to reduce similarity.

- Similarity Index above 25%: Manuscript rejected due to excessive similarity.

Authors are responsible for ensuring that their work is entirely original and that proper citations are used for all referenced materials. Any detected instances of plagiarism will lead to the manuscript being declined without further consideration.

This policy promotes academic integrity and protects the rights of original authors.
